Legacy Systems Modernization | Marketplace Solutions

The **Legacy Systems Modernization Solution** offers a comprehensive framework for improving outdated systems in a well planned and professionally managed process that mitigates risk and is aligned with organizational goals.

The Federal Government needs Legacy Systems Modernization because it helps transform and align the IT enterprise with the evolving business needs and latest tech trends.

Business Problems and Challenges for IT Enterprises with Legacy Systems

- Rising costs to maintain outdated technology
- Constraints of outdated systems prevent integration with new technology and tools
- Failure to meet new business demands and priorities
- Skill Shortages for older technologies increase risk of long-term viability
- Inability to gather key performance indicators to provide timely business analytics

Clients Where Deloitte Provided an Impact

IRS – Customer Account Data Engine 2 (CADE 2)
Replacement of the IRS Individual Master File with a relational database

US BEP – ? – Retirement of an outdated mainframe system and implemented an Oracle Enterprise Business Suite

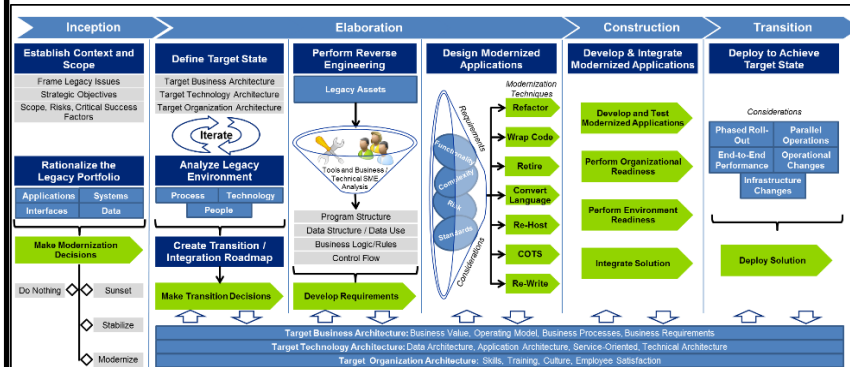

Ginnie Mae – ? – Modernized the legacy technology portfolio into a centralized and seamless system

Deloitte.

Legacy Systems Modernization | Marketplace Solutions

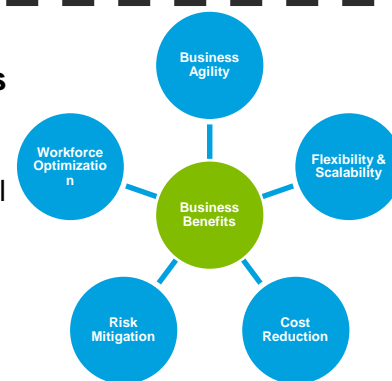

The Deloitte Difference

Deloitte offers a pre-project framework based on the decisions the organization needs to make and the constraints of the legacy system. This framework is then tailored to best meet the approach for each client.

Benefits of Legacy Systems Modernization

Clients that modernize their legacy systems with Deloitte will realize one or more of these benefits
